

Associate Scientist, Analytical and Formulations Development

About Us

aTyr Pharma is a biotherapeutics company engaged in the discovery and development of innovative medicines based on novel immunological pathways. aTyr's research and development efforts are concentrated on a newly discovered area of biology, the extracellular functionality of tRNA synthetases. aTyr has built a global intellectual property estate directed to a potential pipeline of protein compositions derived from 20 tRNA synthetase genes. aTyr is focused on the therapeutic translation of the Resokine pathway, comprised of extracellular proteins derived from the histidyl tRNA synthetase gene family. ATYR1923 is a clinical-stage product candidate, based on the Resokine pathway, which binds to the neuropilin-2 receptor and is designed to down-regulate immune engagement in interstitial lung diseases and other immune-mediated diseases. aTyr is publicly traded on Nasdaq under the symbol "LIFE". Overview

Patients and their challenges provide tremendous drive and meaning to what we do at aTyr. We seek a talented and successful individual that deeply desires to participate in our process to make medicines that improve the lives of patients. aTyr currently has an exciting career opportunity for an Associate Scientist.

Position Summary

We are currently seeking an Associate Scientist to join our Process Sciences team. The successful candidate will perform analytical and formulation development activities to advance our clinical programs and support process development and characterization for pre-clinical candidates.

Qualifications

The role requires the ability to collaborate with colleagues in a cross-functional, intensely fast-paced team environment. The successful candidate will be self-motivated, resourceful, and flexible with the ability to handle rapidly changing objectives and timelines. Experience in an industrial lab focused on protein therapeutics discovery/development is also desired. Experience with MS software is required (Word, Excel, PowerPoint), and scientific software (ChemStation, Astra, Dynamics, Empower, MassHunter, 32 Karat) is preferred.

- Experienced in developing analytical methods with minimal supervision for testing and characterization of mAbs and recombinant proteins using techniques such as UV-vis spectrometry, SDS-PAGE, Western blot, HPLC (SEC-MALS, CEX, RP), and CE
- Experienced in formulation development process and knowledge of biophysical and light obscuration methods

- Working knowledge and understanding of GxP and CMC regulatory requirements related to biologics manufacturing and control
- Experience with analytical method transfers and interfacing with CRO/CMOs for testing, release and stability studies
- Experienced in authoring detailed analytical reports, and providing high quality data for regulatory submissions
- Extremely detail-oriented and diligent in experimental design, data analysis and review
- Organized and able to execute multiple activities in parallel
- High level of motivation and initiative
- Excellent written and verbal communication skills
- Works well in a dynamic, high energy, fast-paced team and collaborate with cross-functional groups
- B.S. with 5+ years or M.S. with 1+ years of biopharmaceutical industry experience or equivalent
